

Uniflair LE TDDR-TUDR

Twin cool water-cooled units with backward-curved fans

20-100kW

**Perimeter cooling for
medium/large data center**

>Refrigerant R-410A

Available Versions:

- >Downflow (TDDR)
- > Upflow (TUDR)

Main Technical Features

Microprocessor control

- Local or remote user terminal
- Integrated management of the Electronic Expansion Valve and refrigerating circuit parameters
- Integrated LAN card for group connection
- Rotation and active stand-by management
- Remote on/off
- Modbus protocol interface
- Other external communication protocols: Bacnet, Lonworks, Trend, Metasys, TCP/IP, SNMP, and StruxureWare™ platform.

Electronic Expansion Valve

- Controlled by the microprocessor and a dedicated software
- Increased precision of the cooling
- Increased energy efficiency of the cooling cycle

Fans

- High-efficiency backward-curved
- Directly-coupled asynchronous motor

Downflow unit with backward-curved fans

Twin-cool air-cooled

- Two independent cooling circuits:
 - Chilled water
 - Water-cooled direct expansion
- Where an installation has a chilled water source which cannot guarantee continuous service, priority is given to the chilled water circuit, with the microprocessor control automatically starting direct expansion operation if the chilled water supply fails or if the water is not cold enough.
- Alternatively, the unit controls can prioritize direct expansion cooling, activating chilled water operation only in the event of a compressor malfunction.

Note: This configuration is shown only as an example.

Main Technical Features

Cooling coil

- Elevated SHR and reduced pressure drops in the air section
- Made from copper tubes mechanically expanded on aluminum fins
- Hydrophilic treatment

Condenser

- Internal brazed water-cooled condenser
- Made from AISI 304 stainless steel

Air filters

- EU4-pleated air filters housed in a metal frame
- Dirty filter differential pressure switch
- Low airflow differential pressure switch

Metal frame air filter

Frame

- Self-supporting frame in galvanized steel with panels.
- External panels coated with RAL9003 epoxy-polyester paint
- Internally lined with heat and sound-proofing insulation.

Electrical panel

- Situated in a compartment separated from the air flow
- Complying with 2006/95/EC directive and related standard

Directives compliance

- 2006/42/EC, 2004/108/EC, 2006/95/EC, 97/23/EC, 842/2006/EC F-GAS regulation

Compressors

- Possibility to select units with two tandem compressors for each circuit (models with the **21 or **42 suffix)
- Better efficiency and regulation capacity at partial loads

Construction Options

- Immersed electrode humidifier (D/U versions)
- Low surface temperature electrical heaters with extended fans, complete with double safety thermostat and manual resetting (T/H versions)
- Hot gas and hot water reheating
- Condensation control on refrigerant side with constant water flow

External Accessories

- Remote, semi-graphic user terminal
- RS485 serial adaptor to communicate with external BMS
- LON FTT10 serial adaptor to communicate with external BMS managed with LON protocol
- TCP/IP serial adaptor to communicate with external BMS managed with SNMP protocol
- AFPS (Automatic Floor Pressurization System) that permits to adapt its availability as a kit with installation instructions
- Motorized damper
- Condensate drain pump
- Suction from the top or front discharge plenums
- Adjustable floor stands

Technical Data

1. Gross Cooling capacities; fans must be deduced to obtain net cooling data.
2. Data refers to nominal conditions : room at 24°C° -50% RH, water temperatures 30-35°C, and ESP = 20Pa.
3. Data refers to nominal conditions: room at 24°C-50% RH, water temperature 7/12°C; glycol 0%, and ESP = 20Pa.
4. Data refers to Downflow unit.
